Protecting your world

SecureShoe Scanner

The continued escalation of global terrorism requires new and improved security measures to combat them. SecureShoe provides airport managers, railroad stations, prisons, stadiums, and VIP security agencies, the first simple to use, automatic, highly reliable, speedy and cost-effective metal detection solution for shoes and the lower body.

The Problem

Terrorism is a clear and present danger that has grown to global proportions and threatens the very fabric of our daily lives. Our current arsenal of tools is lacking. Walk-through gate detectors are not reliable in detecting metal in shoes or on the lower body extremities. As a result, passengers at airport security check-in are required to remove their shoes to pass 'securely', causing passenger discomfort, anxiety and annoyance, air traffic delays and most importantly, compromised security!

The Solution

SecureShoe not only closes this gap, but it speeds passengers quickly and easily through security, without compromising safety; alleviating passenger tension and reducing departure delays. SecureShoe is a new and unique metal detector for shoes and the lower body extremities that is suited for many applications including airports, railway stations, prisons, stadiums, and any other high security portals such as VIP homes and offices, office buildings, and more.

Product benefits

SecureShoe is fast, automatic and easy to use, taking only 1.6 seconds to check each person. It detects reliably without the need to remove shoes. SecureShoe is a compact, portable and user friendly system that easily integrates into standard security procedures, and is manned by the existing security personnel. SecureShoe dramatically reduces flight departure delays due to increased security checks. SecureShoe dramatically reduces smuggling in shoes at border crossings and prisons.

Key benefits of the Secure Shoe Scanner

- ▶ Passengers are more relaxed and can be confident in the high priority being placed on their safety;

SecureShoe Scanner

- ▶ Airport managers and Airlines will see a reduction in the number of delayed flights;
- ▶ Security personnel will have an efficient and reliable system for checking passenger's footwear.

Technical Information:

Detection

SecureShoe:

- ▶ Detects all metals, both ferrous and non-ferrous;
- ▶ Ignores metal objects normally found inside shoes;
- ▶ Detects metal objects that should not be inside or alongside shoes, by distinguishing between the right and left shoes;
- ▶ Indicates the presence of metal objects located near or above the ankle.

Sensitivity

Using the most sensitive setting, the sensors are able to detect objects as small as a cardboard knife blade. Exterior extension detectors detect metal objects as large as handguns or gun parts.

Detection Time

Maximum 1.6 seconds.

Remote Box Indicators

- ▶ Power on: yellow LED;
- ▶ Under test: yellow LED;
- ▶ Metal difference warning: red LED (indicator will remain lit until next test);
- ▶ Metal difference pass: green LED (indicator will remain lit until next test);
- ▶ Connection cable: 5-meter (16.4 feet) cable with D-type connectors.

Power Supply

- ▶ External power supply 220V (110V);
- ▶ Internal 12V rechargeable battery with built-in charger (battery operation time: 4 hours).

Dimensions

Weight: 25kg (49 lbs.);
Size: 60cm x 50cm (23.6" x 19.7");
Footstep Height: 16cm (6.3").
